

ULTIMAX-F

Hot stamping machine for mascara bottles

Leader in machines for decoration of cosmetics packages, CER is continuing its development in adding the ULTIMAX-F to its range, designed for high-throughput decoration of mascara bottles.

The many patented technological innovations ensure uncommonly high performance and top quality decoration.

A CVI (camera vision) provides 100% quality control of the objects.

Very high throughput, up to 7,000 parts per hour.

Automatic distribution of bottles is ensured by the SF-600.

A magnetic system ensures rapid positioning of the silicone die.

Remote maintenance.

Commissioning at the customer site.

Training production staff.

Certified for CE European safety standards.

Associated equipment:

- Foil advance for image transfers
- Interchangeable head for stamping with a silicone roller
- TLA: labeling head
